

How much wall do you need?

Nice to see you! (Wouldn't it be?)

Bi-folding door

A monolithic building structure that offers a warm welcome

**Application**

Cultural and community centre

Architect

Carlos Martinez Architekten AG

Location

Berneck

Solarlux system

Woodline

Hard shell, soft centre

Thanks to a bi-folding door that covers the entire width of the facade, the inside of the event room can be seen from outside the building at any time. One of the core concepts during the design process was to ensure that the warm interior of the wood-clad room could be felt outside, and that the space could be extended seamlessly to include the outdoor area on sunny days.

Haus des Weins

Right in the historical centre of the Swiss village community of Berneck, a new centre for local winery products has been born. Embedded into the compartmentalised structure of their surroundings, two new builds have been added to the old commercial section and carriage shed of the existing farmhouse. The planned construction work - the creation of a suitable stage for presentations and regional wine tastings - required a delicate touch. The Haus des Weins acknowledges the agricultural history and former use of its grounds, and brings the concept of the barn into the present with a contemporary architectural twist.

Wintergarden

“For every dark night,
there’s a brighter day.” *Tupac*

**Application**

Residential building/holiday home

Concept

Dr Peter Kuczia

Visualisation

Alek Pluta, nomadd+

Solarlux system

SDL Avantgarde, Ecoline

One idea? Yes - but so many possibilities

We're not going to use this space to discuss the pros and cons of a wintergarden, even though it could generate solar energy or act as a highly efficient expansion to your living space. We won't mention the fact that direct access to light and fresh air can legitimately help to improve your quality of life. And we wouldn't dream of suggesting that it could help you shift the boundary between the inside of your home and the great outdoors. We'll allow you to draw your own conclusions.

Spaces Online

Over 600 project documents are available online on our web-based, browser-independent reference database "Spaces". The systematic search functionality provides inspiration by allowing you to search for specific building typologies, Solarlux systems, locations, and much more. Simply click on the links provided to view more detailed project reports and information on the product range and products used, as well as technical information:
